**SUMMARY OF THE DIRECT TESTIMONY AND ATTACHMENT
OF ALICE K. JACKSON**

Ms. Jackson is President of Public Service Company of Colorado (“Public Service”) and responsible for its overall operations. Her testimony provides an overview of Colorado’s Power Pathway Project, a 560-mile, 345 kilovolt (“kV”) double circuit transmission network between seven substations.

The State of Colorado and Public Service are on one of the most aggressive trajectories for power sector emission reductions in the United States. The State of Colorado was an early mover on clean energy adoption, starting with the passage of Amendment 37 in 2004, followed by the Clean Air-Clean Jobs Act in 2010. These early legislative actions fostered a market for clean energy in Colorado that has advanced the state toward an ever-cleaner power supply. And while the State’s energy policy has progressed over time, it has consistently relied upon the regulated utility model to advance environmental and clean energy objectives.

Public Service has been there every step of the way, continuously advancing proposals to reduce emissions *and* fulfill its obligation to serve. In 2017, the Company worked with a large and diverse set of stakeholders to develop the Colorado Energy Plan, resulting in the retirement of 660 megawatts (“MW”) of coal generation and approval of a replacement portfolio anchored by over 2,000 MW of clean energy and embedded storage. The Colorado Public Utilities Commission (“Commission”) approved the Colorado Energy Plan in September 2018, which will take Public Service’s system to an estimated 55 percent delivered renewable energy by 2025.

As it turns out, the Commission’s decision on the Colorado Energy Plan was just the beginning. On December 2, 2018, Xcel Energy announced a first-of-its-kind commitment, pledging to reduce emissions by 80 percent from 2005 levels by 2030 and deliver 100 percent carbon-free electricity to customers by 2050. Our leadership on this issue spurred similar commitments across the utility sector nationally, with over twenty utilities having since adopted carbon-free electricity pledges. Shortly after Xcel Energy’s announcement, the Colorado General Assembly embarked on its 2019 legislative

session, which made history from a clean energy and climate policy perspective with two landmark bills:

- House Bill 19-1261 set economywide emission reduction goals of 26 percent from 2005 levels by 2025, 50 percent from 2005 levels required by 2030, and 90 percent by 2050.
- Senate Bill 19-236 directed large regulated utilities to reduce emissions by 80 percent from 2005 levels by 2030 and 100 percent by 2050 using Colorado's tried and true ERP process.

Together, these bills created Colorado's first-ever comprehensive and aggressive climate law.

This brings us to today, with Public Service on the eve of filing its largest and most transformational ERP yet—a plan that will propose to not only meet but exceed the emission reduction targets of Senate Bill 19-236. In its plan to be filed at the end of March, the Company projects a need for over 4,000 MW of utility-scale renewable resources and storage, 1,300 MW of distributed energy resources, and additional flexible dispatchable resources due to both projected resource need and the accelerated retirement of Company-owned coal generation. In order to unlock this plan, however, the Company needs to expand its highly reliable transmission backbone to create a power pathway around the clean energy-rich eastern plains of Colorado. This is why we are bringing the Pathway Project forward to the Commission.

Historical practice has been that the identification of generation preceded transmission development. As a result, today the eastern plains transmission system rests on two very large generation tie lines purposefully constructed to bring clean energy to load. This model has worked in the past; however, as Public Service accelerates the clean energy transition, the State needs an expanded, highly reliable, clean energy super-highway to enable the generation fleet of the future. Since eastern Colorado is home to four of the five renewable energy zones identified in the State, we are proposing building the Pathway Project to connect the resource-rich areas to the high load areas with modern, reliable, and resilient infrastructure. The Pathway Project, in combination with our upcoming Electric Resource Plan ("ERP"), will serve as a model for the rest of the country on how to utilize clean-energy rich resources for the benefit of the consumers—reliably, affordably and collaboratively. The Pathway Project closes that transmission gap as shown below,¹ creating an expanded "backbone" of transmission networked together to transport large amounts of clean energy from remote locations to our customers and dramatically slash emissions in the process. Efficient transmission development policies in the Colorado Public Utilities Law enable transmission expansion like the Pathway

¹ This map includes the Pathway Project and shows existing 345 kV transmission in this area. The Pathway Project on the map reflects the study area for the routing of the project. Land rights will be acquired within this study area for a 150-foot wide right-of-way.

Project to be developed, reviewed, approved and constructed in a timeframe that maximizes tax and emission reduction benefits for customers.

The need for the Project rests on a “Field of Dreams” theory of transmission development—“if you build it, they will come”—informed by projects bid into past ERPs, studies of where the best renewable resources exist, and our knowledge of the renewable energy generation market. This theory was codified by the General Assembly in 2007 but is a policy directive that was really before its time. However, the time to act on that theory is now. The Pathway Project not only advances emission reductions through the ERP process—it is integral to the State of Colorado’s statutory need to meet the economywide emission reduction goals of House Bill 19-1261, a strategy detailed in the Colorado Greenhouse Gas Pollution Reduction Roadmap.

The Roadmap is a template for the State of Colorado’s deliberative development of sector-specific approaches toward the achievement of economywide emission goals, but it requires a down-payment from Colorado utilities through deep emission reductions from the power sector. These reductions from the power sector are a lynchpin to putting the State of Colorado on the path to achieving the economywide emission reduction goals of House Bill 19-1261, and the Pathway Project unlocks the clean energy resources needed to get there. To that end, Public Service is working with other utilities to potentially

advance a partnership approach to the Project that would help other utilities achieve their own emission reduction objectives as well.

For clean energy resources and emission reductions in Colorado, the Pathway Project through the eastern plains is the Field of Dreams. This type of transmission expansion will facilitate the deployment of cost-effective clean energy resources needed to achieve cost-effective emission reductions, all while maintaining the reliability and affordability that our customers expect and deserve. The State of Colorado needs the Pathway Project, in addition to other transmission investment to bring clean energy resources to customers. The Commission should approve the Pathway Project—it will further Colorado as a hub for renewable energy and cement the State as a continued leader in the clean energy transition.

PROCEEDING NO. 21-XXXXE

DIRECT TESTIMONY AND ATTACHMENT OF ALICE K. JACKSON

1 I. **INTRODUCTION, QUALIFICATIONS, PURPOSE OF TESTIMONY, AND**
2 **RECOMMENDATIONS**

3 Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

4 A. My name is Alice K. Jackson. My business address is 1800 Larimer Street,
5 Denver, Colorado 80202.

6 Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT POSITION?

7 A. I am President of Public Service Company of Colorado (“Public Service” or the
8 “Company”).

9 Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THE PROCEEDING?

10 A. I am testifying on behalf of Public Service.

1 **Q. PLEASE SUMMARIZE YOUR RESPONSIBILITIES AND QUALIFICATIONS.**

2 A. As President of Public Service, I am responsible for the overall operations of the
3 Company. A description of my qualifications, duties, and responsibilities is set
4 forth in my Statement of Qualifications at the conclusion of my Direct Testimony.

5 **Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?**

6 A. The purpose of my Direct Testimony is to support the Company's Verified
7 Application for a Certificate of Public Convenience and Necessity ("CPCN") for
8 Colorado's Power Pathway 345 kilovolt ("kV") Transmission Project (the "Pathway
9 Project" or the "Project"). In my Direct Testimony, I will discuss the purpose and
10 need for the Project in the context of the Company's upcoming 2021 Electric
11 Resource Plan and Clean Energy Plan ("2021 ERP & CEP") filing. I will further
12 address how the Pathway Project is aligned with state policy objectives. It is an
13 anchor in our efforts to achieve the clean energy targets of Senate Bill 19-236 and
14 advance Colorado toward the economywide greenhouse gas emission reduction
15 goals of House Bill 19-1261.

16 My Direct Testimony outlines the vision for the Pathway Project and why it
17 is needed for the Company to meet these goals. In addition, I preview the potential
18 for partnership with both jurisdictional and non-jurisdictional utilities (Black Hills
19 Energy ("BHE"), Tri-State Generation and Transmission Association, Inc. ("Tri-
20 State"), Colorado Springs Utilities ("CSU"), and Platte River Power Authority
21 ("PRPA")) in the Project. This Project, if approved by the Commission, will advance
22 the State of Colorado's energy policy goals and the clean energy future for Public
23 Service customers and all of Colorado.

1 **Q. ARE ANY OTHER WITNESSES FILING POLICY TESTIMONY IN SUPPORT OF**
2 **THE CPCN FOR THE PATHWAY PROJECT?**

3 A. Yes. Company witness Ms. Brooke A. Trammell also provides policy testimony in
4 support of the Project, and she takes on the traditional policy or lead witness role
5 of introducing the Company's other witnesses, providing more detail about the
6 process with potential partners, and testifies about other details of the Project.
7 However, given the importance of the Pathway Project in facilitating emission
8 reductions through the transformation of electric generation, I felt it was essential
9 as the President of Public Service to present our vision for the Project and its import
10 for the State of Colorado.

11 **Q. ARE YOU SPONSORING ANY ATTACHMENTS AS PART OF YOUR DIRECT**
12 **TESTIMONY?**

13 A. Yes, I am sponsoring Attachment AKJ-1, which is a true and correct copy of the
14 Colorado Greenhouse Gas Pollution Reduction Roadmap ("Roadmap").

15 **Q. WHAT RECOMMENDATIONS ARE YOU MAKING IN YOUR DIRECT**
16 **TESTIMONY?**

17 A. I recommend that the Colorado Public Utilities Commission ("Commission") grant
18 a CPCN to the Company for the Pathway Project.

19 **Q. PRIOR TO DIVING INTO THE DETAILS OF YOUR TESTIMONY, WHY ARE YOU**
20 **BRINGING THIS CPCN FORWARD FOR COMMISSION APPROVAL NOW?**

21 A. Historically, the practice has been to bring transmission CPCNs of this type
22 following a resource acquisition process, like one of our Phase II competitive
23 solicitations, so that the Company would know the precise locations associated

1 with the new generation assets. Today, as we prepare to take the next step in the
2 energy transition, we are flipping this process a bit on its head due to the unique
3 nature of our forthcoming 2021 ERP & CEP process. We are bringing forward this
4 CPCN now for three reasons: (1) because of construction timing differences
5 between renewable generation resources and transmission infrastructure; (2) to
6 advance cost-effectiveness and optimization; and (3) to maintain system reliability
7 and position the Company to achieve emission reductions. To me, this story starts
8 almost 20 years ago. In 2004, the citizens of the State of Colorado voted to create
9 the first constitutionally-based renewable energy standard, and we have been
10 advancing renewable and clean energy policy since that time.

11 **Q. PLEASE EXPLAIN IN MORE DETAIL.**

12 A. With the advancement of wind and solar technologies, coupled with the decline in
13 pricing and improved forecasting tools, we are at a step-change in how we
14 generate energy for our customers. Because of these changes, the 2021 ERP &
15 CEP is expected to advance a sizable shift in our generation fleet with closures
16 and conversions of existing fossil based generation, a doubling of renewable
17 energy resources on our system today, and additions of flexible resources
18 necessary to ensure reliability of the system. Thanks to past studies of where the
19 renewable resources are located, a number of completed ERPs and robust
20 competitive solicitations, and operations of installed wind and solar resources over
21 the past decade-plus, we have substantial knowledge of where future cost-
22 effective renewable resources will be offered into the competitive acquisition
23 process in the 2021 ERP & CEP. We also know that the timeframe to construct

1 the necessary transmission infrastructure to bring those renewable resources to
2 the load centers is longer than the construction timeline for the renewable
3 resources themselves.

4 **Q. WHERE DOES THE PATHWAY PROJECT FIT INTO THIS?**

5 A. By providing a backbone system in advance of the Phase II resource acquisition
6 process, we remove some of the uncertainty for clean energy developers in where
7 they will have to interconnect their projects, which will reduce the potential price
8 associated with the offer they make in our competitive bidding process.
9 Additionally, as the utility provider we are responsible for ensuring the reliability of
10 the overall system 24 hours a day, seven days a week. The effects of already
11 approved generation resource changes shift our system such that during the
12 summer months we no longer have installed quantities of dispatchable resources
13 that meet our summer peak load, which makes the deliverability of these
14 renewable resources through transmission infrastructure paramount.

15 The solution necessary for the 2021 ERP & CEP lies in proactive, specific,
16 and early action on transmission in order to provide a robust backbone to cost
17 effectively and reliably deliver the energy our customers need. We could file this
18 CPCN Application with the Commission after the conclusion of our 2021 ERP &
19 CEP sometime in calendar year 2023; however, this would delay the deliverability
20 of the transmission solution and thus the renewable energy to customers by
21 years—and we would also miss out on opportunities to capture the benefits of tax-
22 advantaged resources. If we were to delay this filing, it would amount to a delay
23 in taking action to reduce emissions, which I believe lies in direct contradiction to

1 the State's emission reduction objectives. After evaluating all of the various
2 considerations, coupled with the need to achieve emission reductions and deliver
3 the State of Colorado a down-payment on its emission reduction goals, this much
4 is clear: The time for the Pathway Project is now.

1 **II. THE PATHWAY PROJECT AND THE POWER SECTOR'S EMISSION**
2 **REDUCTION DOWN-PAYMENT**

3 **Q. WHAT IS THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY?**

4 A. The purpose of this section of my Direct Testimony is to briefly address the
5 interplay between Senate Bill 19-236 and House Bill 19-1261, both passed by the
6 General Assembly and signed into law by Governor Polis as part of the historic
7 2019 legislative session. I will then address the regulatory strategies outlined in
8 the final Roadmap, provided as Attachment AKJ-1 to my Direct Testimony. The
9 Roadmap represents the State of Colorado's template for its deliberative
10 development of sector-specific approaches toward the achievement of economy-
11 wide emission reductions of 50 percent by 2030 and 90 percent by 2050,
12 consistent with the objectives of House Bill 19-1261. The State of Colorado has
13 taken its own approach to developing a regulatory architecture to advance
14 emission reductions across the economy, by pursuing sector-specific emission
15 regulations that take into account the unique nature of the diverse segments of the
16 economy regulated under any program. The Pathway Project fits directly into this
17 strategy by facilitating dramatic emission reductions from the power sector.

18 **Q. PLEASE PROVIDE SOME BRIEF BACKGROUND ON SENATE BILL 19-236**
19 **AND HOUSE BILL 19-1261.**

20 A. These two bills are both directed at emission reductions, with Senate Bill 19-236
21 focused on the power sector and House Bill 19-1261 focused on emission
22 reductions statewide. On March 21, 2019, House Bill 19-1261 was introduced in
23 the General Assembly. It was passed on May 1, 2019, and signed into law by

1 Governor Jared Polis on May 30, 2019. Senate Bill 19-236 moved forward on a
2 similar timetable. On April 9, 2019, it was introduced in the General Assembly.
3 Senate Bill 19-236 was passed on May 3, 2019, and signed into law by Governor
4 Jared Polis on May 30, 2019.

5 **Q. WHAT GREENHOUSE GAS EMISSION REDUCTION GOALS DOES HOUSE**
6 **BILL 19-1261 PUT IN PLACE?**

7 A. House Bill 19-1261 establishes economywide emission reduction goals in 2025,
8 2030, and 2050, respectively, all based on a 2005 emission baseline. The goals
9 are progressively more stringent, with a 26 percent greenhouse gas emission
10 reduction from 2005 levels required in 2025, a 50 percent greenhouse gas
11 emission reduction from 2005 levels required in 2030, and a 90 percent
12 greenhouse gas emission reduction required by 2050.²

13 **Q. WHAT EMISSION REDUCTION GOALS ARE ESTABLISHED BY SENATE BILL**
14 **19-236?**

15 A. Senate Bill 19-236 is specific to the power sector with emission reduction
16 objectives that align with the emission reduction goals announced by the Company
17 on December 4, 2018. The bill is designed to work in concert with the ERP process
18 and establishes “clean energy targets,” also based on a 2005 baseline, of an 80
19 percent emission reduction by 2030 and 100 percent clean energy by 2050. The
20 legislation requires Public Service to file a CEP as part of its next ERP—hence our
21 2021 ERP & CEP—to meet or exceed the 80 percent clean energy target. If the

² § 25-7-102(2)(g), C.R.S.

1 Commission approves a CEP that achieves an emission reduction of 75 percent
2 from 2005 levels, then Public Service is provided with a “safe harbor” from any
3 additional regulation developed by the Air Quality Control Commission (“AQCC”)
4 that require emission reductions from the power sector through 2030.

5 **Q. IS PUBLIC SERVICE THE ONLY UTILITY REQUIRED TO FILE A CEP?**

6 A. Yes. However, certain other utilities may file a CEP on a voluntary basis and also
7 obtain the benefit of the safe harbor.

8 **Q. HOW DO THESE TWO BILLS WORK TOGETHER IN YOUR OPINION?**

9 A. I am not a lawyer, but to me the answer is simple. To achieve the economywide
10 emission reduction goals of House Bill 19-1261, the General Assembly recognized
11 it would require the continued leadership of the power sector. Accordingly, if
12 utilities are willing and able to advance plans that achieve an 80 percent emission
13 reduction by 2030 from 2005 levels, they are provided with the benefit of a safe
14 harbor from additional AQCC or other emission reduction regulation. This safe
15 harbor provides valuable regulatory certainty for the utilities filing CEPs and an
16 incentive to bring forward meaningful and timely emission reduction efforts. I also
17 think it is important to consider the bigger climate picture here. To that point, the
18 goals established in Senate Bill 19-236 are in-line with climate science. In setting
19 our own ambitious Xcel Energy goal in 2018 of 80 percent emission reductions by
20 2030, we collaborated with an Intergovernmental Panel on Climate Change lead
21 author at the University of Denver to understand how our trajectory aligned with
22 the climate science. Based on analysis of climate scenarios that met both the 2-
23 degree and 1.5-degree temperature rise outcomes, the trajectory of 80 percent

1 reductions by 2030 and 100 percent by 2050 is consistent with achieving these
2 temperature goals in a developed economy.

3 **Q. WHERE DOES THE ROADMAP FIT IN?**

4 A. The General Assembly has established a monumental task for the State of
5 Colorado to reduce emissions. The Roadmap is a vision to get there, but—as I
6 will explain—it relies heavily on the power sector. The Roadmap was finalized by
7 the State of Colorado on January 14, 2021 following a stakeholder process. The
8 Roadmap is an expansive document that contains numerous “Near Term Actions
9 to Reduce GHG Pollution” across key sectors of the Colorado economy: electricity;
10 transportation; residential, commercial, and industrial fuel use; oil and gas; and
11 natural and working lands. Most importantly for purposes of considering it within
12 the context of the Pathway Project, emission reductions from the power sector are
13 a lynchpin to put the State of Colorado on the path it needs to be on to achieve the
14 economywide emission reduction goals of House Bill 19-1261.

15 **Q. PLEASE EXPLAIN.**

16 A. The Roadmap notes that “the largest single opportunity for near term reductions is
17 in the electricity sector, where the Roadmap is targeting an 80% reduction, or 32
18 million tons, below 2005 emissions levels by 2030.”³ It further provides that “[t]he
19 combination of a 2030 GHG pollution reduction target and the potential for any
20 utility to file a Clean Energy Plan provides an important framework to implement
21 enforceable emissions reductions.”⁴ The emission reduction trajectory outlined in

³ Attachment AKJ-1, at 88.

⁴ Attachment AKJ-1, at 91.

1 the Roadmap relies on eligible utilities, not just Public Service, filing resource plans
2 that meet the 80 percent clean energy target of Senate Bill 19-236. The Roadmap
3 states that “[t]he six utilities that operate more than 99 percent of the state’s fossil-
4 fired generation, Xcel Energy, Tri-State Generation and Transmission, Colorado
5 Springs Utilities, Platte River Power Authority, Black Hills Energy, and Holy Cross
6 Energy, have already committed to resource plans that meet or exceed an 80%
7 GHG reduction by 2030.”⁵ Finally, it states that “[t]he state is not proposing to
8 require reductions greater than 80% by 2030 across the board, although it is
9 hopeful that the 80% reductions might be reached earlier or exceeded by 2030.”⁶

10 **Q. WHAT ARE YOUR TAKEAWAYS FROM THIS DISCUSSION IN THE**
11 **ROADMAP?**

12 A. My main takeaway is that the State of Colorado is relying on what we have termed
13 a “down-payment” of emission reductions from the power sector to advance the
14 State of Colorado towards its broader emission reduction goals. And this is where
15 the Pathway Project comes in, because this Project represents a tool to help
16 deliver the utility actions that the State of Colorado is depending on.

17 **Q. WHY IS THE PATHWAY PROJECT A TOOL TO SPUR THE ACTIONS RELIED**
18 **ON BY THE ROADMAP?**

19 A. The power sector and energy regulatory space is evolving at a rapid pace, and
20 utilities have been challenged to meet aggressive emission reduction goals.
21 Further, and critically, the power sector will also be a foundational element to

⁵ Attachment AKJ-1, at 79.

⁶ Attachment AKJ-1, at 79.

1 reducing emissions in other sectors, such as transportation. With timely approval
2 of the Pathway Project, Public Service and all participating utilities will have a
3 project to advance efforts to meet the State of Colorado's energy policy goals.

4 **Q. CAN MEMBERSHIP IN A REGIONAL TRANSMISSION ORGANIZATION**
5 **("RTO") ADVANCE THE EMISSION REDUCTIONS THAT THE ROADMAP IS**
6 **RELYING ON FROM THE POWER SECTOR?**

7 A. The regional market/RTO membership is an important discussion, and Senate Bill
8 19-236 puts in place a process to study potential regional solutions. However,
9 joining an RTO is not one of the near-term actions identified in the Roadmap.
10 Further, while discussions on regional markets and other key policy issues will
11 continue, in order for utilities to be positioned to advance significant emission
12 reductions the State of Colorado needs the Pathway Project. We simply do not
13 have the time for the RTO membership discussion to play out, let alone the time
14 to wait for utilities to take steps to join an RTO if that is ultimately what is in the
15 best interests of Coloradoans—a determination yet to be made. This is followed
16 by the *additional* time to plan and develop transmission under an RTO structure.
17 To be sure, progress on regional power markets can continue to be made in
18 parallel actions, but further analysis is necessary and that is a discussion for
19 another day and proceeding. The Pathway Project requires action now to meet
20 the State of Colorado's emission reduction goals, and we cannot wait an unknown
21 number of years for a regional structure to begin planning and building
22 transmission here. In fact, the Pathway is a no-regrets strategy. It will lead to a
23 more robust state transmission grid, one that will provide the state of Colorado

1 with a more reliable and affordable electricity system regardless of whether the
2 State ultimately chooses to join an RTO.

3 **Q. HOW QUICKLY AND HOW SIGNIFICANTLY IS THE ROADMAP DEPENDING**
4 **ON THE POWER SECTOR TO ADVANCE EMISSION REDUCTIONS?**

5 A. Both quickly and aggressively. Figure 3 of the Roadmap,⁷ excerpted below,
6 illustrates this quite well.

7 **Figure AKJ-D-1: Roadmap Emission Reductions by Sector**

⁷ Attachment AKJ-1, at 21.

1 **Q. PLEASE EXPLAIN WHAT THIS FIGURE SHOWS IN THE ROADMAP.**

2 A. It shows that a significant portion of the reductions necessary to meet the 2030
3 emission reduction goals of House Bill 19-1261 are dependent on CEPs filed
4 pursuant to Senate Bill 19-236. The Roadmap recognizes as much, stating that
5 “[a]chieving the 2030 goals will rely on deep reductions in pollution from electricity
6 generation by continuing the transition to renewable energy ...”⁸ The Roadmap
7 narrative and analyses build out the reliance on the power sector between now
8 and 2030 to meet the State of Colorado’s energy policy objectives. It also
9 recognizes that “[o]ne important benefit flowing from the rapid transition towards
10 clean electricity is that it magnifies the pollution reduction, public health, and other
11 benefits of electrification in other sectors, such as cars and buildings.”⁹

12 **Q. HOW DO THESE BILLS FIT INTO THE HISTORICAL CONTEXT OF EMISSION**
13 **REDUCTIONS FROM THE POWER SECTOR?**

14 A. Our December 2018 announcement and the historical climate package that
15 followed set the stage for the latest act in the clean energy transition. While Figure
16 AKJ-D-1 and the Roadmap are forward-looking, historical context around the
17 performance of the power sector in achieving emissions reductions is also helpful.
18 From 2005 to 2020, working collaboratively with this Commission, Public Service
19 reduced carbon dioxide emissions by 46 percent. No other sector, and no
20 Colorado firm I am aware of, can demonstrate the track record of emissions
21 reduction in total tons that Public Service can. I draw attention to this point for two

⁸ Attachment AKJ-1, at 22.

⁹ Attachment AKJ-1, at 174.

1 reasons. First, it is critical for the State of Colorado to recognize that our electric
2 customers have long been supporting the biggest strides in emission reductions in
3 the state. Second, it illustrates that the Roadmap's focus on the power sector is
4 well-placed.

5 As we move forward, affordability and reliability will be of critical
6 importance—just as they were in our December 2018 announcement and are in
7 the language of Senate Bill 19-236 and House Bill 19-1261, respectively. The
8 Pathway Project provides a transmission backbone that is key to assuring reliability
9 and allows for a greater geographic spread of renewables, all while creating jobs
10 in the State of Colorado. We understand that technologies and economics can
11 support significant further progress on emission reductions in the power sector in
12 an affordable way. We take on that mission with a full sense of what is expected
13 of the power sector, and this is why we will propose a pathway under our 2021
14 ERP & CEP to exceed the aggressive clean energy target under Senate Bill 19-
15 236. The Pathway Project is a catalyst for this purpose and for the emission
16 reduction down-payment from the power sector that the Roadmap relies on.

1 **III. COLORADO'S POWER PATHWAY OVERVIEW**

2 **Q. WHAT IS THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY?**

3 In this section of my Direct Testimony, I provide a brief overview of the project. I
4 also provide insight into the resource needs of the Company's forthcoming 2021
5 ERP & CEP and the clean energy objectives of BHE, Tri-State, PRPA, and CSU.
6 All of these utilities are taking committed actions to reduce emissions and map a
7 clean energy future for their customers across the State of Colorado. The Pathway
8 Project is a necessary step to unlock the clean energy resources necessary to
9 meet our clean energy goals and the desires of our customers, while providing the
10 State of Colorado a substantial down-payment on efforts to meet the economywide
11 emission reduction goals of House Bill 19-1261.

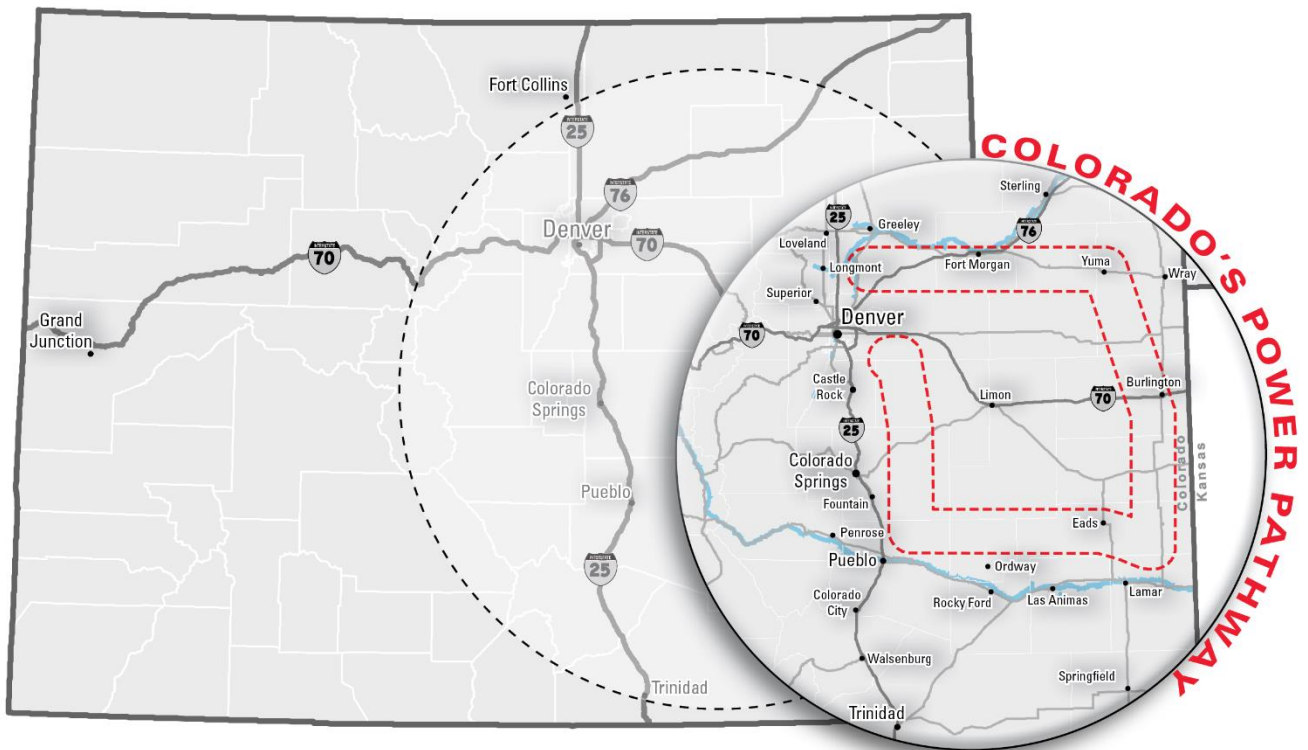

12 **A. Overview of the Pathway Project**

13 **Q. PLEASE PROVIDE A BRIEF DESCRIPTION OF THE PATHWAY PROJECT.**

14 A. The Pathway Project involves constructing an approximately 560-mile, 345 kV
15 double circuit transmission network between seven substations. The Project will
16 connect the Front Range to areas of northeastern, eastern, and southeastern
17 Colorado that are rich with renewable energy resource potential, but do not
18 currently have a backbone network transmission system that can integrate new
19 clean energy resources. The northern terminus of the Pathway Project will be at
20 the Company's existing Fort St. Vrain Substation (located at the Fort St. Vrain
21 Generating Station) in Platteville in western Weld County. The Pathway Project
22 then extends east to a new Canal Crossing Substation near the existing Pawnee
23 Substation and Pawnee Generating Station; then extends east/southeast to a new

1 Goose Creek Substation south of the City of Burlington; then extends south to a
2 new May Valley Substation northeast of the City of Lamar; then extends west to
3 the planned Tundra Substation near the Comanche Generating Station. The
4 Project then extends north to the southern terminus at the Company's existing
5 Harvest Mile Substation, located adjacent to the City of Aurora in Arapahoe
6 County. The Project also involves expansion of the Fort St. Vrain, Pawnee, and
7 Harvest Mile Substations; expansion of the planned but not yet in-service Tundra
8 Substation; and construction of the new Canal Crossing, Goose Creek, and May
9 Valley Substations. Below is a general locational map for the Project.

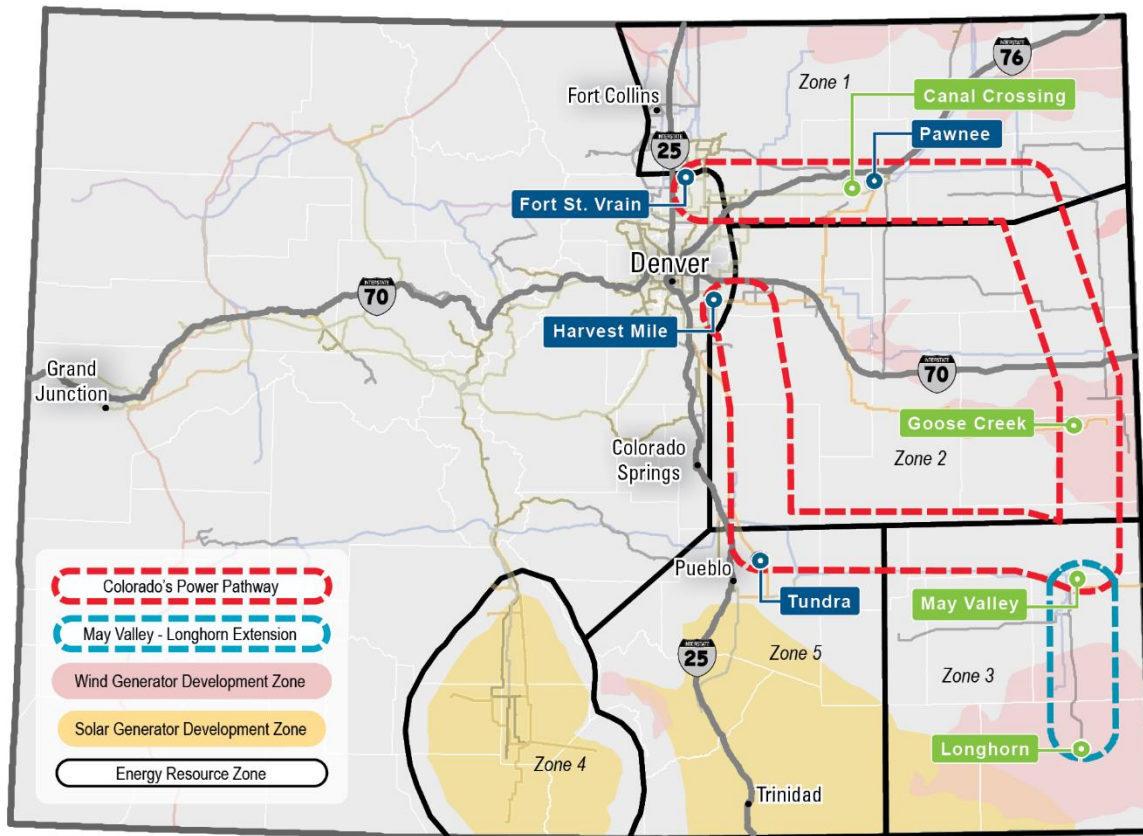

10 **Figure AKJ-D-2: Location of Colorado's Power Pathway**

11 In addition, a map overlaid on the Energy Resource Zones (“ERZs”) created
12 by Senate Bill 07-100 is provided below for reference.

1

Figure AKJ-D-3: Colorado's Power Pathway & ERZs

2 **Q. WHAT DOES “BACKBONE” MEAN IN THE TRANSMISSION CONTEXT?**

3 A. A “backbone” system generally refers to extra high voltage transmission lines
4 networked together that can move large amounts of energy from a distant location
5 to load areas.¹⁰ Backbone transmission systems support the reliability of the
6 transmission system because of their networked nature. A grid supported by
7 networked backbone transmission is better positioned to withstand outages
8 without losing a generation resource or load.

¹⁰ “Networked” transmission systems are those that offer more than one route to move power to load, thus increasing reliability.

1 **Q. DOES THE PROJECT REQUIRE EXPANSION OR CONSTRUCTION OF NEW**
2 **SUBSTATIONS?**

3 A. Yes. The Project involves the expansion of three existing substations, the
4 expansion of one not yet in-service but previously planned substation, and the
5 construction of three new substations. The three new substations will be 345 kV
6 switching stations. Company witness Ms. Carly R. Rowe provides more detail
7 regarding the locations of the substations, and Company witness Mr. Byron R.
8 Craig discusses the engineering design of the substations.

9 **Q. ARE THERE ANY ADDITIONAL OPTIONS THE COMPANY IS BRINGING**
10 **FORWARD FOR COMMISSION CONSIDERATION IN THIS PROCEEDING?**

11 A. Yes—a 90-mile, 345 kV double circuit extension called the May Valley-Longhorn
12 Extension. The May Valley-Longhorn Extension would run from the southeastern
13 corner of the Pathway Project near Lamar, Colorado and extend south near Vilas,
14 Colorado. The May Valley-Longhorn Extension would provide developers with
15 transmission access into ERZ 3, enhancing the geographic diversity of renewable
16 energy resources for the 2021 ERP & CEP and beyond. Our analysis of the
17 Pathway Project showed potential benefits from this extension option, and
18 therefore we wanted to bring this forward to the Commission and stakeholders for
19 consideration. Over the course of this proceeding, we would like to get feedback
20 from stakeholders regarding pursuit of this optional extension to the Pathway
21 Project now. We anticipate that as the Commission considers the Pathway
22 Project, stakeholder positions on the May Valley-Longhorn Extension option may
23 inform the Commission's ultimate decision in this proceeding.

1 **Q. WHAT IS THE COST OF THE PATHWAY PROJECT?**

2 A. The Pathway Project is estimated to cost approximately \$1.7 billion. If the May
3 Valley-Longhorn Extension is added in, the incremental cost would be
4 approximately \$250 million. As discussed by Company witnesses Ms. Trammell
5 and Ms. Amanda R. King in their respective Direct Testimonies, these cost
6 estimates do not include additional costs associated with reactive power, network
7 upgrades, grid reinforcements, and interconnection facilities that will be necessary
8 to reliably implement the 2021 ERP & CEP.

9 **Q. IS PUBLIC SERVICE REQUESTING A CPCN FOR ASSOCIATED REACTIVE**
10 **POWER, NETWORK UPGRADES, GRID REINFORCEMENTS, OR**
11 **INTERCONNECTION COSTS NECESSARY TO RELIABLY IMPLEMENT ITS**
12 **CEP IN THIS PROCEEDING?**

13 A. No. As discussed in more detail by Ms. Trammell, our request in this instant
14 proceeding is to secure CPCN approval for the Pathway Project (*i.e.*, the
15 transmission line and associated substation work). Additional information related
16 to other transmission needs associated with the Company's 2021 ERP & CEP,
17 such as reactive support, network upgrades, grid reinforcements, or specific
18 interconnection facilities, will be requested through follow-on CPCNs following the
19 Commission's Phase II ERP decision.

20 **B. Utility Resource Needs**

21 **Q. PLEASE PROVIDE SOME BACKGROUND ON THE 2021 ERP & CEP.**

22 A. The clean energy transition is not new to the Company or the State of Colorado.
23 The State has always been at the forefront of this transition, stretching back to the

1 approval of Amendment 37 in 2004 and continuing forward with the passage Clean
2 Air-Clean Jobs Act (“CACJA”) by the General Assembly in 2010. The CACJA
3 focused on reducing key emissions of sulfur dioxides, nitrogen oxides, and
4 mercury emissions from selected coal plants by 90 percent; it also reduced carbon
5 dioxide emissions and water consumption while building a more flexible fleet to
6 incorporate greater amounts of renewable energy. We followed the CACJA with
7 the Colorado Energy Plan, approved by the Commission in 2018. The Colorado
8 Energy Plan resulted in the accelerated retirement of 660 MW of coal-fired
9 generation (Comanche 1 and Comanche 2) and the acquisition of more than 1,100
10 MW of wind, 800 MW of solar, 275 MW of battery storage, and over 350 MW of
11 existing natural gas generation capacity. Once the Colorado Energy Plan is fully
12 implemented, Public Service will reduce system emissions by approximately 19
13 million short tons (“MST”) by 2025, from a 2005 baseline, which is more than 50
14 percent of the total statewide emission reductions required by that year under
15 House Bill 19-1261. The Colorado Energy Plan will also bring our system to 55
16 percent renewable energy.

17 On the heels of the Colorado Energy Plan, the General Assembly passed
18 Senate Bill 19-236 in 2019, setting the stage for the 2021 ERP & CEP. Senate Bill
19 19-236 was part of a historic package of climate and emission reduction legislation
20 signed into law by Governor Polis. For the first time, it put in place specific
21 emission reduction constraints for the ERP process. Under Senate Bill 19-236,
22 Public Service must meet a clean energy target consisting of an 80 percent carbon
23 dioxide emission reduction from 2005 levels by 2030, through the filing of a CEP

1 as part of the ERP (in MST with the adjusted baseline approach supported by the
2 Colorado Department of Health and Environment and the AQCC, this clean energy
3 target is approximately 5.4 MST). This landmark legislation sets the stage for the
4 forthcoming 2021 ERP & CEP—and creates the need for the Pathway Project.

5 **Q. HOW DOES AN EMISSION REDUCTION BILL CREATE A NEED FOR THE**
6 **PROJECT?**

7 A. The 2021 ERP & CEP will be the largest resource plan ever brought forward by
8 the Company. I frame the need for the Project in more detail in the next section,
9 but some perspective on the resource additions contemplated as part of our 2021
10 ERP & CEP is necessary. In addition to taking action regarding the Company's
11 existing coal fleet, we are currently projecting the addition of approximately 2,300
12 MW of wind, 1,600 MW of utility-scale solar, and 400 MW of storage, among other
13 resource additions, as part of the 2021 ERP & CEP. This in turn creates the need
14 for the Pathway Project to unlock location-constrained clean energy resources,
15 meet this substantial resource need, and provide for reliable deliverability of this
16 amount of incremental variable generation.

17 **Q. HOW DO OTHER UTILITIES' EMISSION REDUCTION OBJECTIVES FIT INTO**
18 **THIS PARADIGM?**

19 A. Public Service is not the only utility pursuing aggressive emission reductions. Our
20 potential partners in this Project are doing the same thing. Tri-State filed its ERP
21 with the Commission in December of 2020 and is seeking to achieve an 80 percent
22 emission reduction from 2005 levels by 2030 with their plan. Tri-State's generic
23 modeling and preferred portfolio shows renewable resource additions of 1,850 MW

1 and 225 MW of storage, as well as gas additions. Tri-State projects about 400
2 MW of wind and solar in eastern Colorado in its preferred portfolio; however, the
3 ultimate geographic locations of resources will be determined through a Phase II
4 competitive solicitation. The PRPA Board of Directors approved a 20-year
5 Integrated Resource Plan (“IRP”) in October 2020 that seeks to achieve emission
6 reductions of above 90 percent by 2030 from 2005 levels. As part of the approved
7 Portfolio 2 in the IRP, PRPA projects acquisition of approximately 700 MW of
8 renewable resources and storage by 2030. CSU also approved an IRP that will
9 move towards an 80 percent emission reduction from 2005 levels by 2030, which
10 depends on retiring coal generators and adding gas and renewable resources. By
11 2050, the plan projects acquisition of 417 MW of storage, 150 MW of solar, 500
12 MW of wind, and 20 MW (combined) of geothermal/biomass/biogas. Finally, BHE
13 will file its ERP with the Commission next year but has announced it will voluntarily
14 file a CEP to meet the 2030 clean energy target, which will presumably require the
15 acquisition of additional clean energy resources.

16 **Q. WHAT DO YOU TAKE AWAY FROM ALL OF THIS ACTIVITY?**

17 A. Without new transmission investment and development of the Project, our CEP
18 will struggle to come to fruition, as will the significant actions contemplated and
19 projected by other Colorado utilities. Additionally, by other utilities coming together
20 and potentially partnering on the Project, the cost effectiveness of not only the
21 Project but also the CEP improves for the Company’s customers as well as for the
22 other utilities’ customers. This segues into the need for the Pathway Project.

1 **IV. FRAMING THE NEED FOR THE PATHWAY PROJECT**

2 **Q. WHAT IS THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY?**

3 A. The purpose of this section of my Direct Testimony is to frame the need for the
4 Pathway Project and offer a framework for the Commission to analyze the Project
5 and determine whether it is in the public interest. The utility industry is rapidly
6 evolving and leading all other major sectors in reducing emissions across the
7 economy, and Colorado is at the cutting edge of those efforts. In order to meet
8 this next challenge, however, we need to solve one of the more confounding issues
9 faced in the energy transition—the “chicken-and-egg” issue of better aligning
10 transmission planning and generation resource planning.

11 **Q. PLEASE EXPLAIN.**

12 A. Public Service intends to bring forward aggressive carbon reduction portfolios that
13 both meet and exceed the 80 percent emissions reduction target required by
14 Senate Bill 19-236, and transmission investment is needed to facilitate this
15 transformation. The power sector has been at the forefront of emission reductions
16 in Colorado with Public Service leading the way and the ERP as the primary vehicle
17 to advancing these emissions reductions—but we recognize there is more to be
18 done. The power sector must continue to lead the way on Colorado economywide
19 emissions reductions and Public Service, through its fully regulated business
20 model, is prepared to do so.

21 Unfortunately, for a number of reasons the evolution of Colorado’s
22 transmission system has lagged that of the State’s generation system, in part due

1 to regulatory policy where the identification of generation was a necessary
2 prerequisite to transmission development. Historically, the need for transmission
3 investment was driven by the siting of generation resources. A utility would
4 propose a generation resource and a transmission line would subsequently be
5 approved to bring the energy from that generation resource to load. But as reliance
6 on clean energy resources in remote locations to meet resource needs and
7 emission reduction objectives has increased, it has created the need to know
8 where transmission will be located *ahead* of competitive solicitations. Developers
9 need to know that transmission will be available to unlock location-constrained
10 projects and allow for cost-effective development. In the absence of backbone
11 transmission proposed and approved ahead of competitive solicitations,
12 generation developers must propose long tie lines to connect their resources to
13 existing transmission—assuming transmission is available at all.

14 **Q. HAVE PAST POLICIES ATTEMPTED TO REMEDY THE SO-CALLED**
15 **“CHICKEN-AND-EGG” ISSUE?**

16 **A.** Yes, but with limited success. The alignment of transmission investment and
17 resource planning has been one of the most challenging regulatory issues at both
18 state and federal levels for years. In 2007, the General Assembly passed Senate
19 Bill 07-100 in an effort to allow for “Field of Dreams” transmission development (“if
20 you build it, they will come”). Under this theory, transmission investment should
21 front-run resource planning to unlock location-constrained resources and give
22 developers certainty about transmission location *before* they submit their bids.

1 **Q. DO YOU THINK SENATE BILL 07-100 HAS BEEN A SUCCESS FROM A**
2 **POLICY PERSPECTIVE?**

3 A. Senate Bill 07-100 has had mixed results as applied in practice. For a number of
4 reasons, including siting difficulties and opposition from landowners and
5 intervenors, the transition of the transmission system has not matched the pace of
6 the transition of the generation fleet.

7 **Q. WHY DO YOU THINK SENATE BILL 07-100 HAS NOT LIVED UP TO ITS**
8 **PROMISE?**

9 A. There is no one to blame for these implementation issues, as a confluence of
10 factors contributed to its limited success. But the biggest issue from my
11 perspective is that, in some ways, the forward-looking “Field of Dreams” theory of
12 transmission development was a policy before its time. This is not to say that
13 Senate Bill 07-100 is bad policy; to the contrary, it is indicative of the policy and
14 vision we need to meet the State of Colorado’s ambitious energy policy goals.
15 Without explicit emission reduction targets, Senate Bill 07-100 just did not have
16 companion climate policy to bring it to life. But regardless of the past, the time is
17 now to act on the previous intent, further the decarbonization of the power sector
18 with the objective of meeting and exceeding the 2030 clean energy target, and
19 ultimately deliver 100 percent carbon-free electricity to customers by 2050—all
20 while ensuring the reliability and affordability of the bulk power system. If we do
21 not advance significant transmission investment now, it will constrain the ability of
22 the power sector to meet aggressive emission reduction objectives and continue
23 to lead the way on emission reductions.

1 **Q. WHY IS THE PATHWAY PROJECT NEEDED PRIOR TO THE 2021 ERP & CEP?**

2 A. We need the Pathway Project approved ahead of our Phase II competitive
3 solicitation to give bidders certainty that transmission capacity will be available
4 across ERZs designated by Senate Bill 07-100. Moreover, it provides reliability
5 benefits as high levels of variable energy resources are brought on the system and
6 the dependency on these variable resources to meet system reliability increases.
7 The Pathway Project will be particularly helpful in facilitating access for projects
8 across ERZs 1, 2, 3 and 5; moreover, and as explained in more detail by Company
9 witness Mr. James F. Hill, the Pathway Project provides an opportunity to achieve
10 further geographic diversity of wind and solar resources across the ERZs tapped
11 by the Project. In August 2020, the Colorado Coordinated Planning Group
12 (“CCPG”) launched its 80x30 Task Force “to provide a forum for all stakeholders
13 to collaboratively identify transmission infrastructure that will enable Colorado
14 utilities to meet the state’s decarbonization goals.”¹¹ The Phase I Transmission
15 Report developed by the 80x30 Task Force (provided as Attachment ARK-5 to
16 Company witness Ms. King’s Direct Testimony) succinctly summarized the
17 interrelationship between the “chicken-and-egg” dilemma and the State of
18 Colorado’s aggressive emission reduction goals:

19 Traditionally, the transmission system in Colorado has been
20 designed and constructed based on known generation additions to
21 each provider’s system. However, waiting to design and construct
22 transmission in the wake of generation acquisition has resulted in
23 numerous limitations to selecting and interconnecting new

¹¹ Attachment ARK-5, at 5. The CCPG is a joint, high-voltage transmission system planning forum and performs the transmission planning functions as Subregional Planning Group under WestConnect, which is a FERC Order No. 1000 planning region.

1 generation, especially beneficial energy resources located in
2 renewable energy rich areas such as Northeastern, Eastern, and
3 Southern Colorado, thus resulting in a “chicken and egg” timing
4 dilemma. The time needed to develop and construct renewable
5 resources, such as wind and solar, is much less than traditional fossil
6 fuel plants, which in the past allowed time for transmission to be
7 constructed to interconnect and deliver the generation. Waiting until
8 generation projects are identified to plan transmission is no longer
9 suitable, especially under Colorado’s policy goal of reducing carbon
10 dioxide emissions from Colorado’s electric sector. SB19-236
11 recognizes that transmission is a critical element to achieving the
12 state’s clean energy targets as it will provide access to renewable
13 energy rich areas in Colorado as well as other beneficial energy
14 resources.¹²

15
16 The Pathway Project is brought forward to meet this charge. If we do not
17 advance significant transmission investment now, it will constrain the ability of the
18 power sector to meet aggressive emission reduction objectives and continue to
19 lead the way on emission reductions. Put plainly, we need projects like the
20 Pathway Project—projects in the spirit of Senate Bill 07-100, the original legislation
21 that sought to bring transmission planning and resource planning into better
22 alignment.

23 **Q. IS THE COMPANY DESIGNATING THE PATHWAY PROJECT AS A BID-**
24 **ELIGIBLE PLANNED TRANSMISSION PROJECT AND MOVING IT THROUGH**
25 **THE PROCESS CONTEMPLATED BY THE JOINT TRANSMISSION**
26 **PROPOSAL?**

27 **A.** No. The Joint Transmission Proposal is pending before the Commission in
28 Proceeding No. 19R-0096E and represents a constructive step in aligning

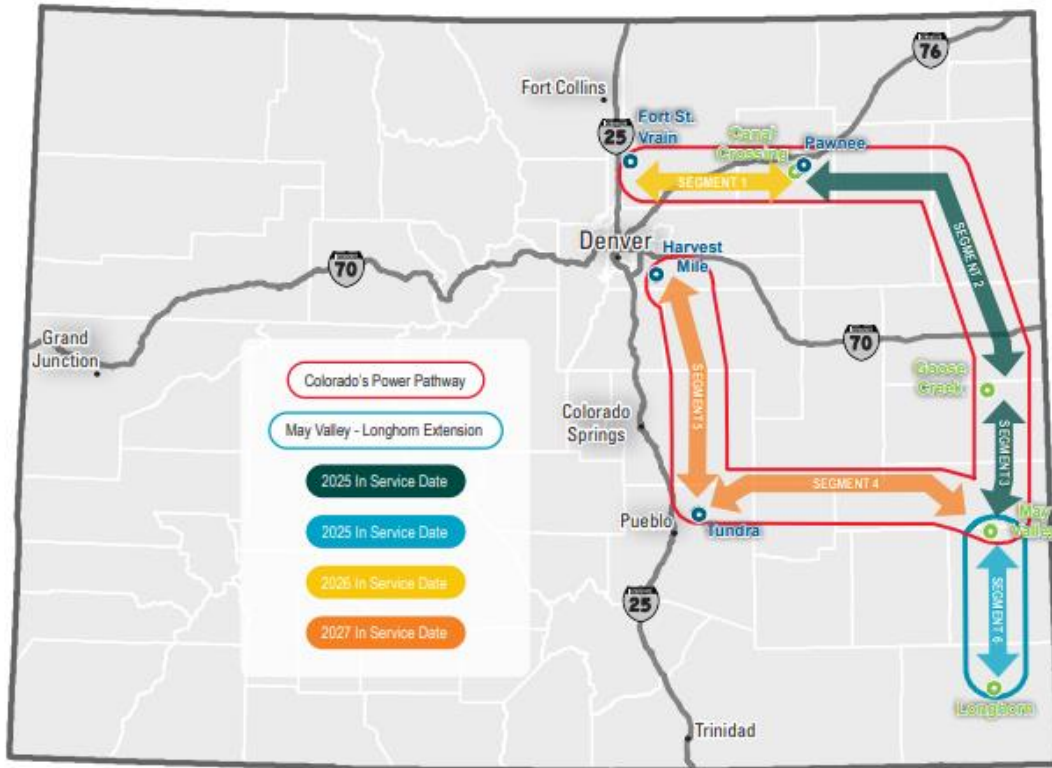

¹² Attachment ARK-5, at 5.

1 transmission planning and resource planning.¹³ The purpose of this filing and the
2 goal of the Pathway Project, however, is to act now to have certain segments in
3 service in 2025 so that the Company can procure tax-advantaged renewables for
4 customers. The Joint Transmission Proposal contemplates the designation of
5 planned transmission as bid-eligible in the Phase I process, with the Phase II
6 process ultimately determining if we should move forward with CPCNs for the
7 designated planned transmission projects. I do not expect an ERP Phase II
8 decision until early 2023, which will not allow time to develop the Pathway Project
9 and have certain segments in service by 2025 if we do not commence the
10 regulatory process now.¹⁴ Accordingly, it is a timing issue. I continue to believe
11 that the Joint Transmission Proposal will help bring cost-effective projects online;
12 nevertheless, we need the Pathway Project as an anchor in eastern Colorado on
13 a more expedited timeframe. The estimated in-service dates by Project segment
14 are reflected in the figure below.

¹³ In Proceeding No. 19R-0096E, the Commission requested stakeholder feedback on how to solve the “chicken-and-egg” dilemma. In response, the Company worked extensively with a coalition of independent power producers (“IPPs”) (the Colorado Independent Energy Association (“CIEA”) and Interwest Energy Alliance (“Interwest”)), customer interests (Colorado Energy Consumers (“CEC”)), government interests (the Colorado Energy Office (“CEO”)), conservation interests (Western Resource Advocates (“WRA”)), and BHE to advance a proposal entitled the Joint Transmission Proposal. The Joint Transmission Proposal enjoys diverse stakeholder support and proposes to allow, for the first time, designation of planned transmission lines that bidders may bid into as part of the ERP competitive solicitation. The Joint Transmission Proposal is pending before the Commission and, in my view, it represents a constructive step toward aligning transmission investment and resource planning.

¹⁴ Company witness Mr. Brian J. Richter discusses the Company’s planned sequencing of the Pathway Project to maximize the opportunity to capture Federal tax credits. The sequencing would allow bidders to bid into segments as they are placed in-service, which will position the Company to capture the benefits of the Production Tax Credit (“PTC”) and Investment Tax Credit (“ITC”) extension.

1 **Figure AKJ-D-4: Estimated In-Service Dates by Project Segment**

2
3 **Q. DOES RECENT LEGISLATION PASSED BY CONGRESS INCREASE THE**
4 **TIME-SENSITIVITY FOR DEVELOPMENT OF THE PATHWAY PROJECT?**

5 **A.** Yes. The Consolidated Appropriations Act, 2021 passed by Congress and signed
6 into law at the end of 2020 included legislative aspects that affect resource
7 acquisition timing in the ERP. The legislation extended the in-service date when
8 wind and solar facilities need to be placed in service from end-of-year 2024 to end-
9 of-year 2025. More specifically, wind and solar facilities placed in-service by
10 December 31, 2025 can qualify for 60 percent PTCs and 26 percent ITCs,
11 respectively, so long as the project has begun construction by January 1, 2022 for
12 the PTC and January 1, 2023 for the ITC. Prior to the passage of the legislation,

1 wind facilities placed in-service after December 31, 2025 would not receive any
2 PTCs. Solar facilities placed in-service after December 31, 2025 would receive a
3 10 percent ITC.

4 **Q. AGAINST THIS BACKDROP, WHY DO YOU THINK THERE IS A NEED FOR**
5 **THE PATHWAY PROJECT?**

6 A. The Company alone projects to acquire more resources as part of its 2021 ERP &
7 CEP than it has ever acquired in previous ERP cycles. This is driven by native
8 resource needs combined with coal actions necessary to achieve the next tranche
9 of emission reductions, *i.e.*, the next 20 percent or more to meet the 2030 clean
10 energy target of Senate Bill 19-236. Moreover, purely from the Company's
11 perspective, utility planning horizons are long and we need to begin thinking now
12 about our pathway to meet the 2050 carbon-free goal we announced in December
13 2018 and that is now reflected in the Public Utilities Law after the passage of
14 Senate Bill 19-236. The Company has a need for approximately 4,000 MW of
15 utility-scale renewable resources to meet its resource need *and* meet the 80
16 percent clean energy target—not including storage, 1,300 MW of distributed
17 energy resources, and additional flexible dispatchable resources. These
18 generating resources will require access to the transmission system, and the
19 existing transmission network in eastern Colorado is not capable of integrating the
20 magnitude of new resources needed to implement the Company's 2021 ERP &
21 CEP without the Pathway Project. Our last ERP makes this point clear—the
22 transmission system in this part of the State of Colorado is full.

1 **Q. WHAT DO YOU MEAN WHEN YOU SAY THAT THE TRANSMISSION SYSTEM**
2 **IS “FULL” IN THIS PART OF COLORADO?**

3 A. This is explained in more detail in the Direct Testimonies of Company witnesses
4 Mr. Hill and Ms. King. A brief analysis of the transmission investment needed to
5 implement our last approved ERP is instructive on this point. The Commission
6 issued a Phase II Decision in September 2018 approving the Preferred Colorado
7 Energy Plan Portfolio (“CEPP”). The approved CEPP includes the early retirement
8 of two coal-fired generating facilities with a combined generating capacity of
9 approximately 660 MW and added over 2,000 MW of renewable resources
10 (including embedded storage packaged with some of the renewables). The
11 Company identified transmission investment necessary to implement the CEPP
12 across three general categories three categories: Voltage Control Facilities,
13 Network Upgrade Costs for Delivery, and Interconnection Facilities.¹⁵ Most salient
14 to my point here, however, is that these transmission facilities accommodate the
15 new CEPP resources—they do not provide transmission capacity headroom for
16 future additional generation resources. The CEPP also filled the Rush Creek Gen-
17 Tie and much of the available transmission capacity through its clean energy
18 resource additions.

19 The CCPG reached the same conclusion through the 80x30 Task Force
20 stakeholder process. Specifically, as part of the stakeholder process “[a]

¹⁵ The Commission has granted CPCNs for two of the three transmission investment categories (Voltage Control Devices and Network Upgrades), and the Company is preparing its CPCN application(s) for the Interconnection Facilities for filing later this year.

1 benchmark analysis was performed to determine if there were any potential
2 reliability issues associated with the proposed 80x30 carbon reduction plan with a
3 'do nothing' transmission case."¹⁶ New generation was placed within ERZ 1 and
4 5, with no new generation placed within ERZs 2 and 3—key areas unlocked by the
5 Pathway Project—"because previous analysis has determined little to no injection
6 capability at locations within ERZs 2 and 3."¹⁷ The benchmark analysis ultimately
7 was "unable to reliably accommodate new generation in ERZs 1, 2, 3, and 5, and
8 is therefore likely unable to accommodate 2030 carbon reduction goals."¹⁸ This
9 analysis supports the conclusion that the transmission system is "full," as I
10 described above.

11 **Q. HOW DOES ANY POTENTIAL PARTNERSHIP AFFECT THE NEED FOR THE**
12 **PATHWAY PROJECT?**

13 A. If the additional clean energy resource needs of Tri-State, BHE, CSU, and PRPA
14 are factored in, it just buttresses the need for this Project. To be sure, we do not
15 know where all of these generation resources will be located, but we do know we
16 will rely on remote locations in rural Colorado where there is significant untapped
17 wind and solar resources to make these plans come to life. I also know that the
18 "chicken-and-egg" dilemma does not afford us the luxury of being able to wait. As
19 I explain later in my Direct Testimony, the Pathway Project is needed to facilitate
20 the interconnection of renewable resources and ultimately allow for a collective

¹⁶ Attachment ARK-5, at 12.

¹⁷ Attachment ARK-5, at 13.

¹⁸ Attachment ARK-5, at 13-14.

1 down-payment from Public Service—and potentially other partners as well—
2 towards the economywide emission reduction goals of House Bill 19-1261.

3 **Q. WHAT ABOUT THE MAY VALLEY-LONGHORN EXTENSION?**

4 A. The May Valley-Longhorn Extension provides additional optionality and unlocking
5 potential beyond the Pathway Project. It provides additional transmission
6 interconnection opportunities for potential renewable generation developers in the
7 wind-rich ERZ 3 area of the state, and we anticipate new wind as a significant
8 component of our 2021 ERP & CEP. A line to this area would facilitate clean
9 energy resource development, where we anticipate some of the most cost-
10 effective wind projects will emerge. Critically, we believe this wind resource zone
11 is geographically diverse, meaning it offers a meaningfully differentiated
12 generation pattern to help improve reliability as compared to wind generation
13 located in other areas of the state where we already have significant wind
14 resources on our system. Moreover, it would decrease the need for developers to
15 construct multiple gen-tie lines in this region to interconnect to the Pathway Project
16 and, by extension, include the costs of these long gen-tie lines in bid prices. If
17 developers have to include such gen-tie costs, this could raise their bid prices and
18 reduce the Company's ability to include and bring forward geographically diverse
19 wind resources in proposed portfolios in the Phase II process.

1 **V. POTENTIAL PARTNERSHIP OVERVIEW**

2 **Q. WHAT IS THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY?**

3 A. The purpose of this section of my Direct Testimony is to provide a high-level
4 overview of the potential partnership in the Pathway Project. If we reach
5 agreement through ongoing negotiations, the partnership enhances our already
6 robust need case for the Pathway Project through providing lower costs for the
7 Public Service customers and a pathway for other utilities in the state to meet their
8 own emission reduction goals. Company witness Ms. Trammell provides more
9 details regarding the proposed process to integrate this partnership and embark
10 on a consolidated proceeding before the Commission that would allow for the
11 issuance of CPCNs to all jurisdictional utilities ultimately participating in the
12 Pathway Project.

13 **Q. ARE TRANSMISSION PARTNERSHIPS UNUSUAL?**

14 A. I would say no. The Commission is familiar with these types of CPCN proceedings
15 where multiple utilities may file jointly, or file independently, and then end in joint
16 ownership or otherwise.

17 **Q. IS THE COMPANY REQUESTING A CPCN FOR TRI-STATE AND BHE AS**
18 **PART OF ITS DIRECT CASE?**

19 A. No. The Company has filed joint CPCNs in the past for transmission projects, but
20 the Company—with a significant resource need in its upcoming ERP to continue
21 to transition its system, meet resource needs as early as 2025, and ultimately
22 advance a plan to meet the 2030 clean energy target—needs this Project, with or
23 without partners. At the same time, we recognize the State of Colorado’s

1 objectives—emission reductions from not just Public Service and not just IOUs,
2 but all utilities—in order to position the State to meet the aggressive economywide
3 emission reduction goals of House Bill 19-1261. As the Pathway Project was
4 studied in the CCPG process, Tri-State, BHE, CSU and PRPA discussed joint
5 participation in the Project so that we can all potentially utilize the Pathway Project
6 to meet the emission reduction goals codified by the General Assembly as well as
7 emission reduction goals pledged by the various utilities.

8 **Q. HOW DOES TIMING FACTOR INTO THIS PROPOSED APPROACH?**

9 A. Our anticipated 2021 ERP & CEP filing deadline of March 31, 2021 is fast-
10 approaching, and a decision on the Pathway Project is needed before the
11 conclusion of Phase I of our ERP. A joint CPCN process with simultaneous CPCN
12 filings by the three utilities would have been ideal; however, discussions among
13 the parties are still ongoing. While it is anticipated that one or more of the other
14 utilities will participate in the Project, Public Service is moving forward first with our
15 CPCN application. Based on the continuing discussions with the other utilities, if
16 a partnership comes to fruition it is anticipated that Tri-State and/or BHE may file
17 their respective CPCN applications for their participation in the Project within 45
18 days of our CPCN filing. Ms. Trammell discusses this staggered CPCN process
19 in her Direct Testimony.

20 **Q. WHY IS IT IMPORTANT TO GET THE REGULATORY PROCESS STARTED?**

21 A. We need the Pathway Project's regulatory process to begin for the Project to be
22 in-service starting in 2025, in order to capture tax-advantaged resources, meet
23 resource needs, and continue our energy transition in as cost-effective a way as

1 possible. Notably, the economywide emission reduction targets under House Bill
2 19-1261 begin in 2025 with a 26 percent reduction requirement. This target will be
3 challenging to meet and bringing on clean energy earlier will be critical in the State
4 of Colorado's efforts to meet both the 2025 and 2030 goals in the bill. We expect
5 that the 2021 ERP & CEP, with its significant proposed changes across our
6 existing generation fleet, unprecedented levels of renewable development, and the
7 groundbreaking Pathway Project transmission initiative, will have costs to
8 customers. We can effectuate this continued transition in the most cost-effective
9 manner, by capturing remaining PTC/ITC benefits. Maximizing the efficient
10 delivery of new resources is foundational to doing so.

11 **Q. DOES THE COMPANY NEED THE PATHWAY PROJECT EVEN IF THE**
12 **PARTNERSHIP DOES NOT ULTIMATELY COME TO FRUITION?**

13 A. Yes—and our direct case here establishes that. The partnership certainly has
14 benefits in that it would facilitate emission reductions from multiple utilities. At the
15 same time, and as I previously testified, the transmission system is full and we are
16 on the cusp of the most significant ERP process that we have ever filed and the
17 largest resource plan in the history of the State of Colorado.

18 **Q. IS THE COMPANY PROPOSING TO CONSOLIDATE THIS CPCN**
19 **PROCEEDING WITH ITS 2021 ERP & CEP PROCEEDING?**

20 A. No. It is important to put this proceeding on a track where the Commission can
21 grant a CPCN for the Pathway Project before our ERP Phase I process concludes.
22 This serves two purposes.

1 **Q. WHAT IS THE FIRST PURPOSE?**

2 A. It allows the extensive siting and permitting efforts to commence as soon as
3 possible for a project consisting of approximately 560 miles of transmission line,
4 the construction of three new substations, and the expansion of four existing
5 substations.

6 **Q. WHAT IS THE SECOND PURPOSE?**

7 A. The Company is committing to aggressive but attainable in-service dates (“ISDs”)
8 for different segments of the Pathway Project to give bidders certainty, position the
9 Company to capture PTC/ITC benefits for its customers, and allow bidders to bid
10 into the Pathway Project in the Company’s Phase II competitive solicitation.
11 Therefore, a CPCN decision is needed before the Commission’s Phase I ERP
12 decision in our 2021 ERP & CEP proceeding to put us in the best position possible
13 to meet the Project segment ISDs. In addition, to the extent that our partnership
14 with jurisdictional and non-jurisdictional utilities materializes, it just furthers the
15 case for not consolidating this CPCN proceeding with the 2021 ERP & CEP
16 proceeding. Put another way, in this instance the Pathway Project would enable
17 clean energy resource acquisitions for our ERP *and* the Tri-State and BHE ERPs,
18 respectively, rendering it administratively appropriate to have this CPCN as a
19 separate and distinct adjudicated proceeding. While BHE will not file its ERP for
20 another year, the Public Service and Tri-State ERPs contemplate larger levels of
21 clean energy resource acquisitions due to the larger size of these utilities. Further,
22 Tri-State’s ERP process is already underway, making the timing issue even more
23 acute.

1 **Q. ARE YOU AWARE OF ANY PRECEDENT FOR THE PROCEDURAL PROCESS**
2 **CONTEMPLATED FOR THIS PROCEEDING?**

3 A. Not exactly as we propose here. But I am also not aware of any situation in the
4 century-plus history of this Commission where utilities were simultaneously
5 undertaking aggressive emission reduction initiatives creating an unprecedented
6 need for the timely development of clean energy resources—and seeking to do so
7 in a compatible way. The State of Colorado needs these resource plans to
8 structure a down-payment of extensive emission reductions from the power sector
9 and propel progress toward its economywide emission reduction goals, and this
10 process—while perhaps novel and unprecedented—is necessary to make that
11 happen.

1 **VI. CONCLUSION**

2 **Q. DO YOU HAVE ANY CONCLUDING REMARKS?**

3 A. Yes. With the Pathway Project, we are ready to deploy steel in the ground for the
4 next act in the energy transition. The time for emission reductions is now, and the
5 Company requests approval of Colorado's Power Pathway as a step in the long
6 and challenging process to facilitate a carbon-free future. Public Service has a
7 need for this Project on its own, as our direct case shows. If we are able to advance
8 a partnership approach to facilitate emission reductions from other utilities, it
9 further establishes the already demonstrated need for the Project. While the need
10 for this Project is based on a "Field of Dreams" theory, this theory is informed by
11 projections in our 2021 ERP & CEP, bids from past ERPs, and studies of where
12 the best renewable resources exist. We need the Pathway Project in-service in a
13 timely way to advance cost-effective emission reductions and capture the benefits
14 of PTCs and ITCs for customers. The Pathway Project gives the State of Colorado
15 a down-payment on emission reductions while allowing for the safe and reliable
16 delivery of the variable energy resources that our clean energy future depends
17 upon. It is in the public interest and the Commission should approve it.

18 **Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS.**

19 A. I recommend the Commission grant a CPCN for the Pathway Project including, if
20 it deems it appropriate, the May Valley-Longhorn Extension.

21 **Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?**

22 A. Yes, it does.

Statement of Qualifications

Alice K. Jackson

I am President of Public Service Company of Colorado and responsible for the utility's overall operations. Before being promoted to President, I served as Vice President, Strategic Revenue Initiatives. As Vice President, Strategic Revenue Initiatives, I led a growing team of six individuals focused on primarily two areas: corporate economic development ("CED") and strategic revenue opportunities. Under our CED function, my team collaborated with the Operating Companies' Customer and Community Relations organizations to enhance Xcel Energy's presence at the national level in economic development activities as well as assisted our internal teams on business retention and expansion. Pursuant to our strategic revenue opportunity activities we actively examined new technologies and new non-merger and acquisition business transactions which could result in revenue opportunities.

As the former Regional Vice President of Rates and Regulatory Affairs, I was responsible for providing leadership, direction, and technical expertise related to regulatory processes and functions for Public Service. My duties included the design and implementation of Public Service's regulatory strategy and programs, and directing and supervising Public Service's regulatory activities, including oversight of rate cases. Those duties included: administration of regulatory tariffs, rules, and forms; regulatory case direction and administration; compliance reporting; complaint response; and working with regulatory staffs and agencies.

I accepted the RVP position with Public Service in November 2013 after holding the same position in another Xcel Energy Inc. ("Xcel Energy") subsidiary, Southwestern

Public Service Company (“SPS”). In May 2011, I accepted a position with Xcel Energy Services Inc. (“XES”) as Director, Regulatory Administration, and the position was transferred to SPS effective January 1, 2012. I was subsequently promoted to Regional Vice-President, Rates and Regulatory Affairs, and in that capacity, I devoted my time to regulatory issues in SPS’s Texas, New Mexico, and FERC jurisdictions.

From December 2001, through May 2010 I was employed by various subsidiaries of Occidental Petroleum Corporation (“Oxy”). Throughout my time at Oxy, I held positions of increasing responsibility from software programming supporting the trading organization within Oxy operations, to directing and operating Oxy’s wholly owned REP in the ERCOT (“Electric Reliability Council of Texas”) region and leading various regulatory activities of Oxy’s facilities located within the New York Independent System Operator, the Southwest Power Pool (“SPP”), and ERCOT. In 2001, I began my professional career in the energy industry through my employment with Enron Energy Services, where I provided software application design and support to a variety of departments within that company.

I graduated from Texas A&M University in 2001, receiving a Bachelor of Business Administration degree with a major in information and operations management. I have testified before this Commission and the New Mexico Public Regulation Commission and provided written testimony a number of times before the Public Utility Commission of Texas. In July 2017 I completed the Program for Leadership Development at Harvard Business School in Boston, MA.

AFFIDAVIT OF ALICE K. JACKSON
ON BEHALF OF
PUBLIC SERVICE COMPANY OF COLORADO

I, Alice K. Jackson, being duly sworn, state that the Direct Testimony and attachments were prepared by me or under my supervision, control, and direction; that the Direct Testimony and attachments are true and correct to the best of my information, knowledge and belief; and that I would give the same testimony orally and would present the same attachments if asked under oath.

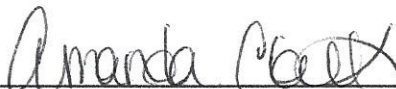

Dated at Denver, Colorado, this 2nd day of March, 2021.

Alice K. Jackson
President, Public Service Company of Colorado

Subscribed and sworn to before me this 2nd day of March, 2021.
